

Research Group “Data Science and Statistics”

Head: Nikolaus Umlauf (Nikolaus.Umlauf@uibk.ac.at)

Introduction

Data Science and Statistics is nowadays an immensely important part of mastering a wide range of scientific problems, from biological, ecological, economic, medical, physical, psychological etc.

Especially keywords like **big data**, **artificial intelligence** and **machine learning** fall into this research area, but also **software development** and its maintenance are more important than ever.

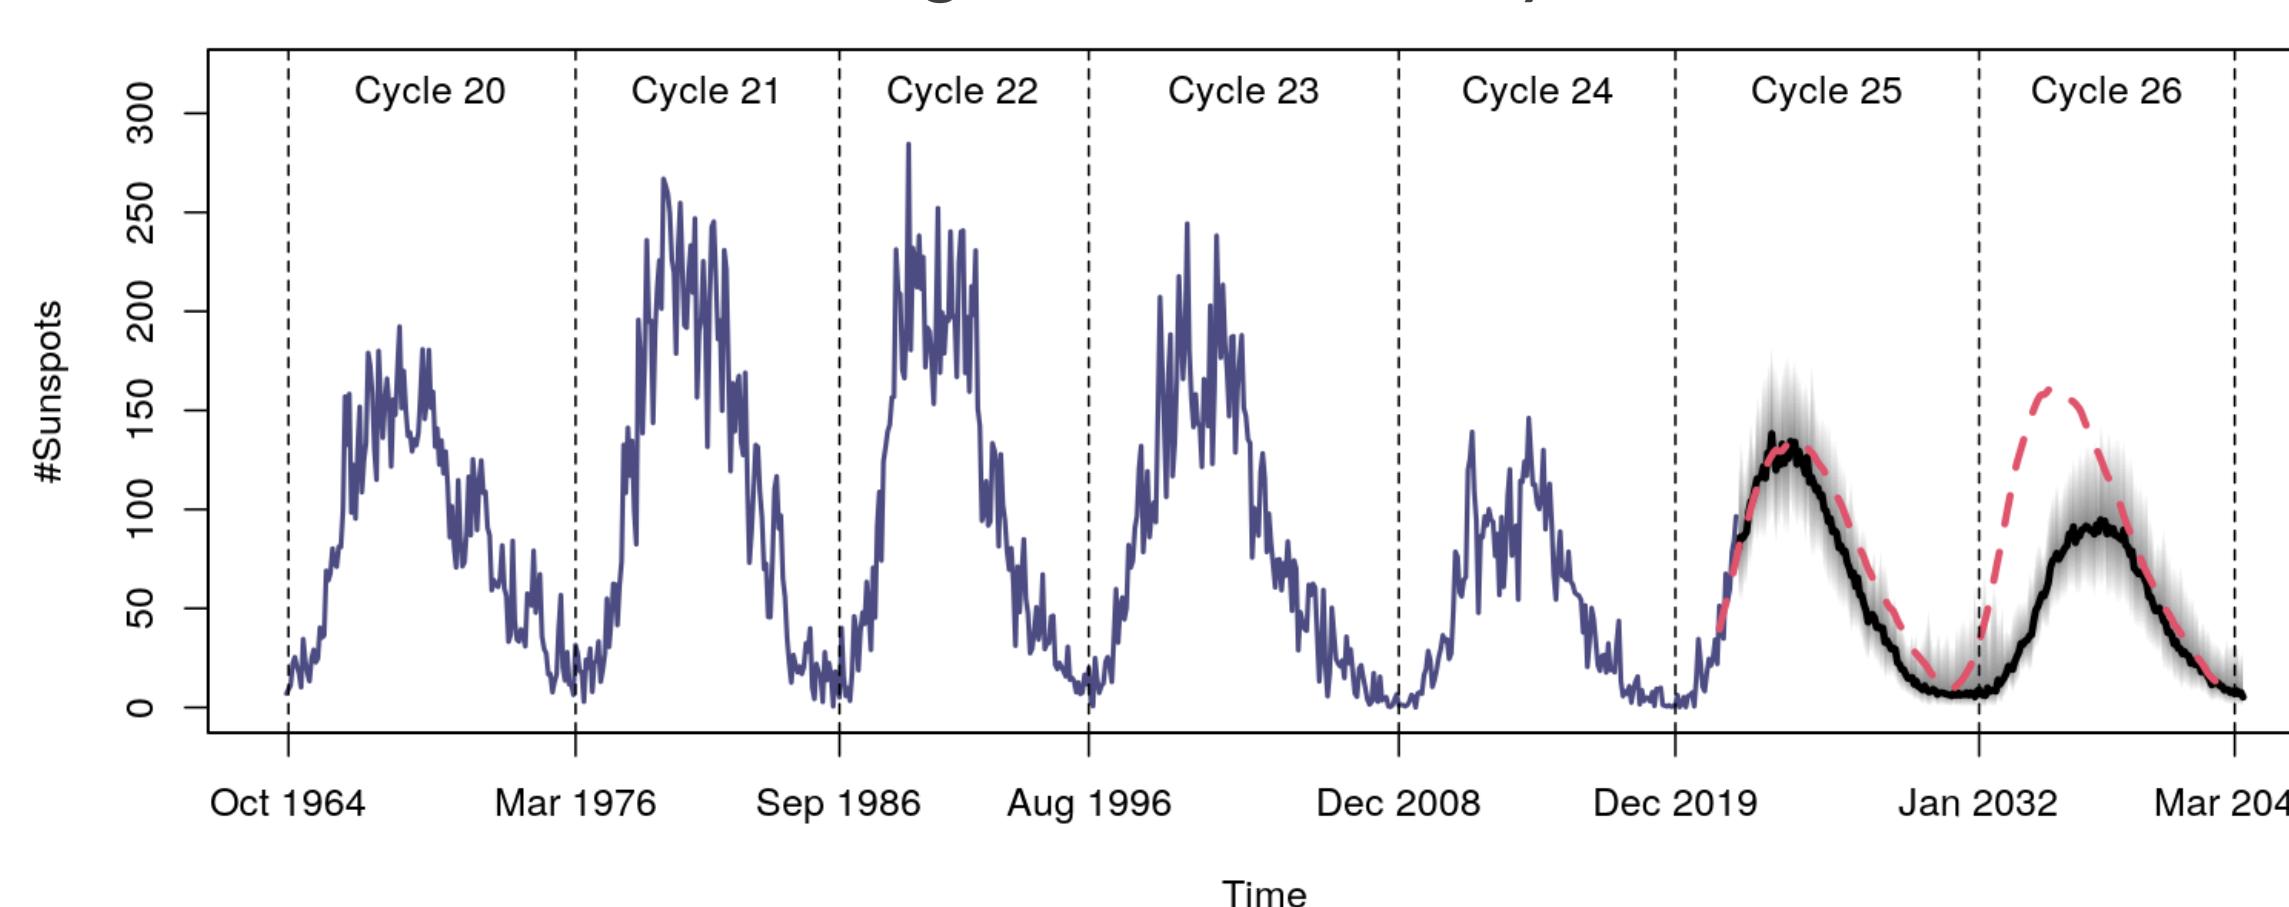

The Data Science and Statistics research group will provide a cross-disciplinary platform to connect all those who want to interact and exchange ideas in this extremely dynamic environment and are interested in collaborative projects, from method development to applications and software.

- A platform for interdisciplinary research collaborations that organizes regular exchanges among members and international researchers.
- Consulting services on all topics related to Data Science and Statistics.
- Organize workshops on the latest developments in this very dynamic field of research.

Selection of Recent Applications

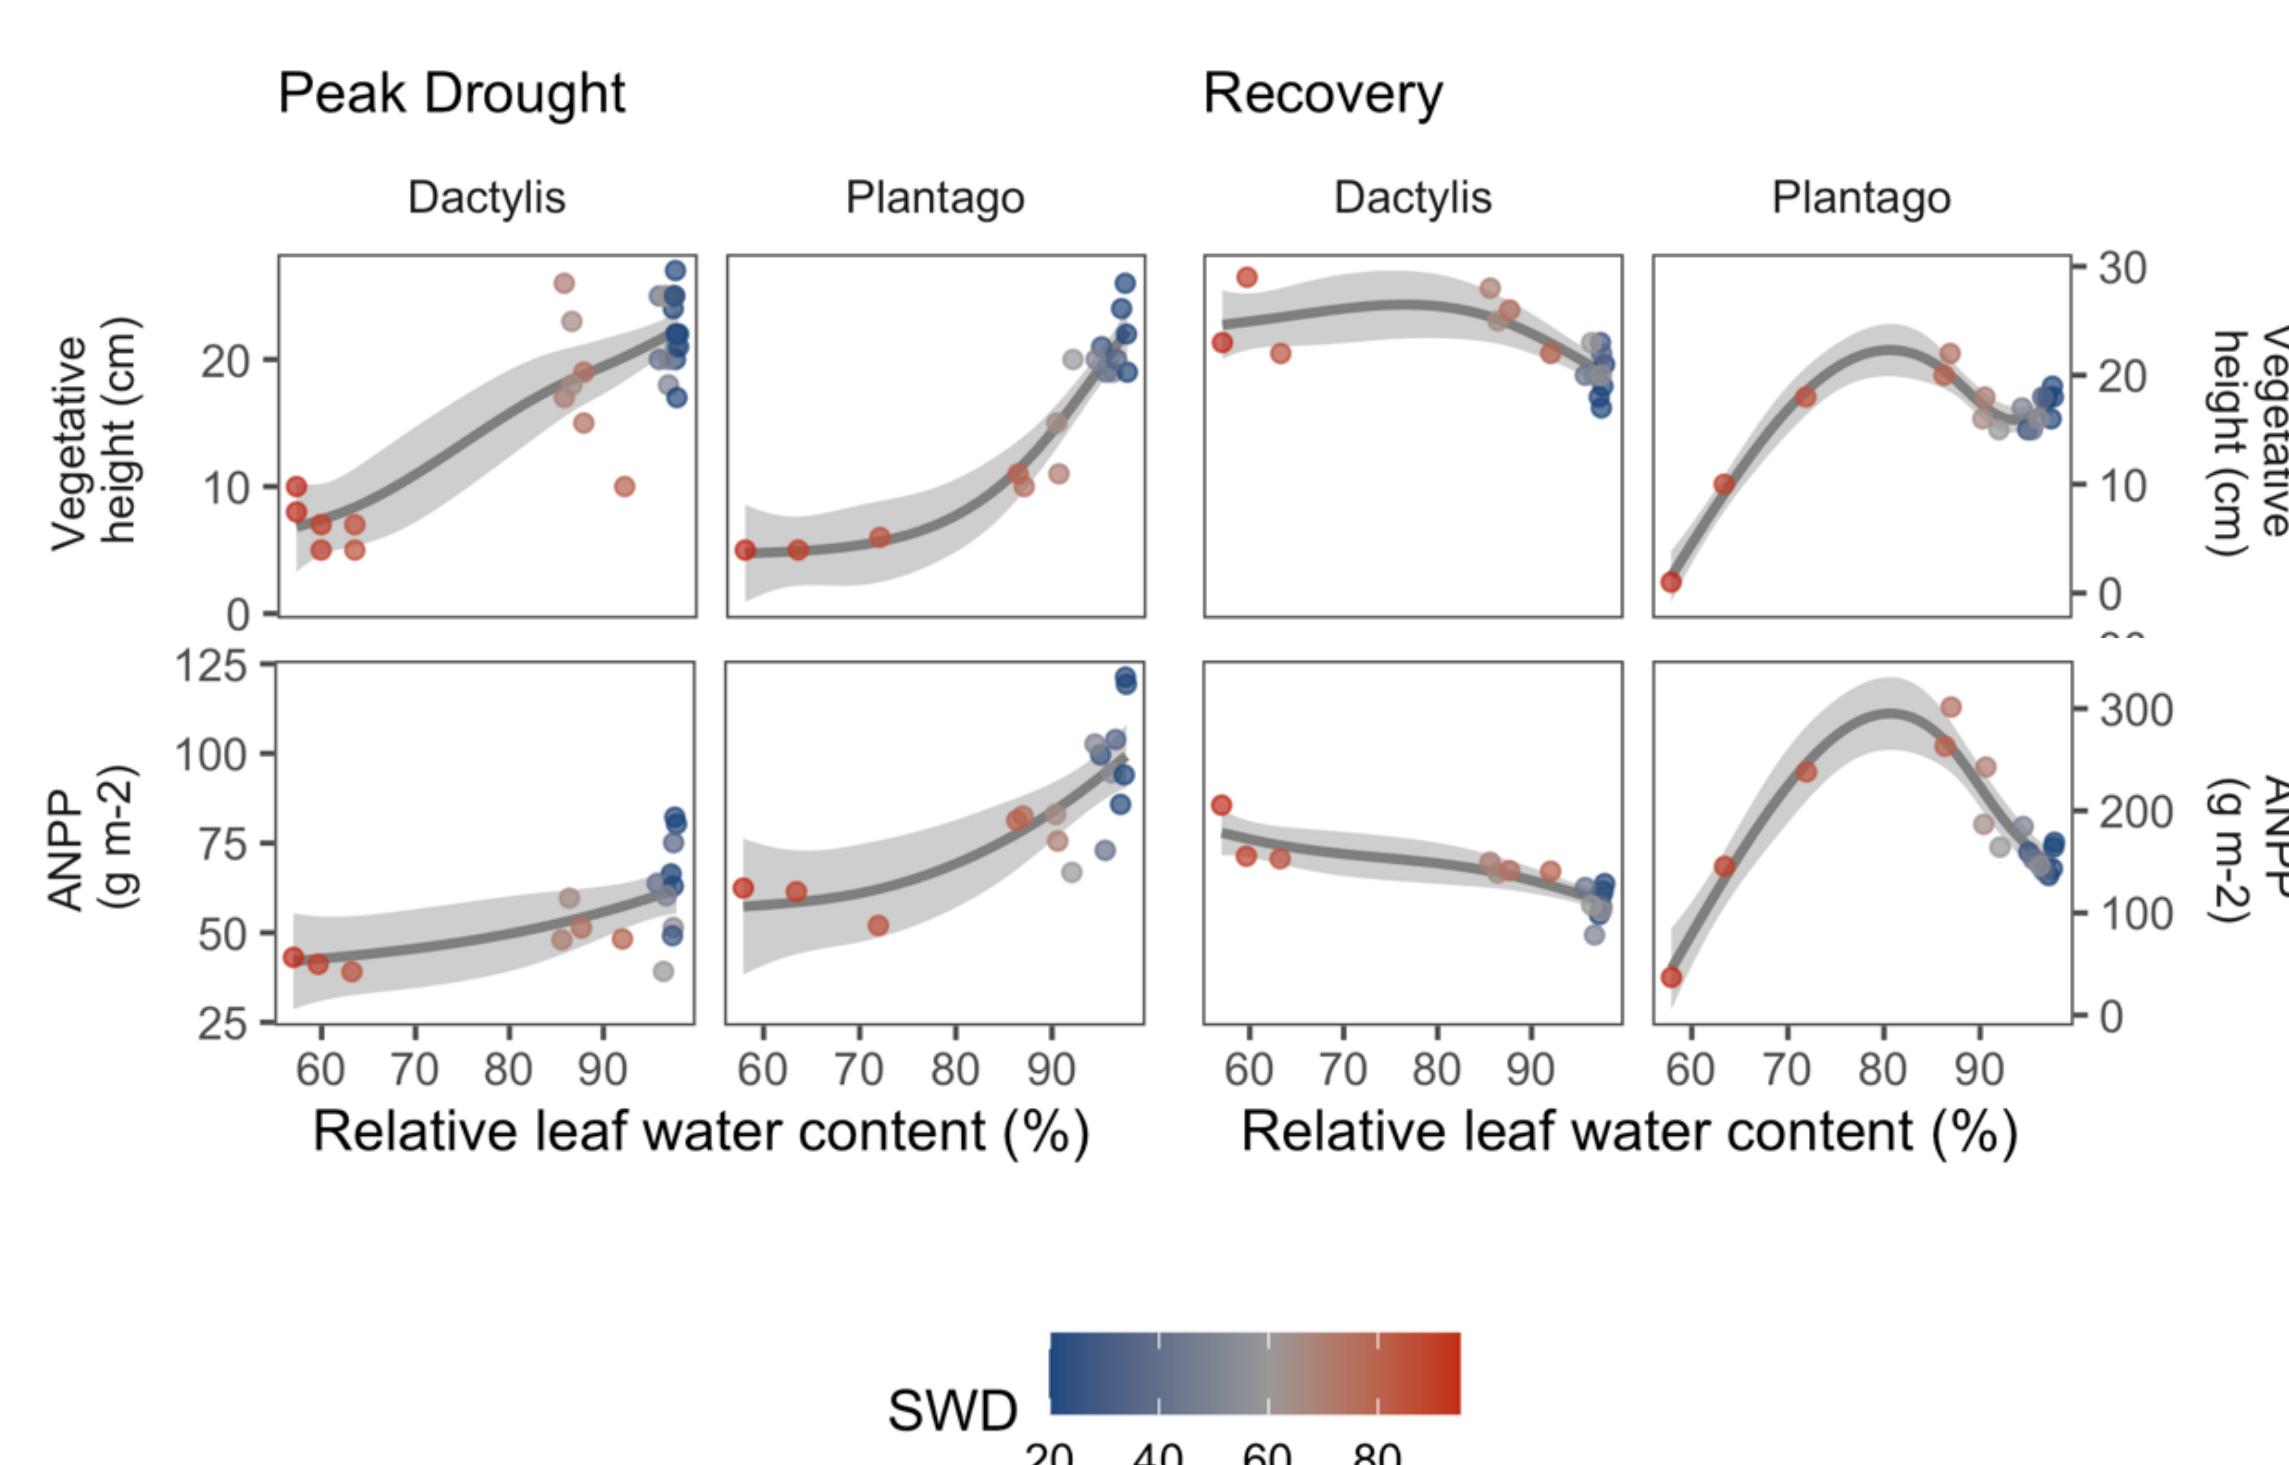

Astrophysics:

State-of-the-Art Machine Learning for Solar Activity Prediction.

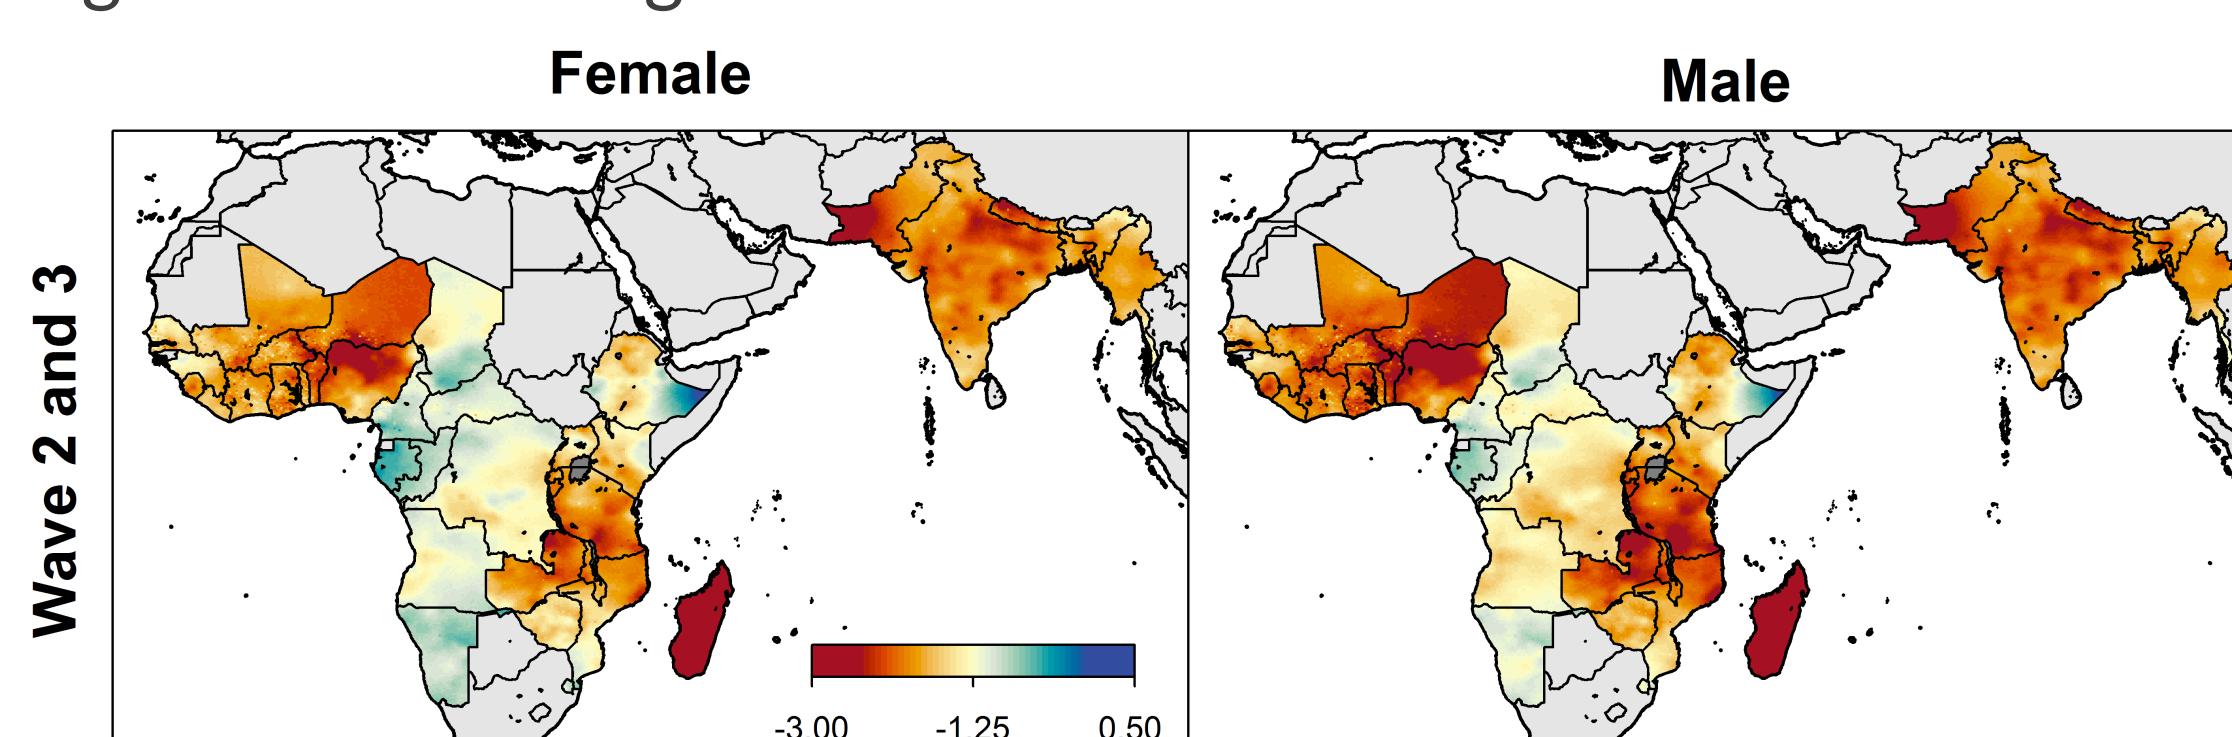

Biology:

Statistical Inference to Explain Plant Resistance and Recovery Relationships.

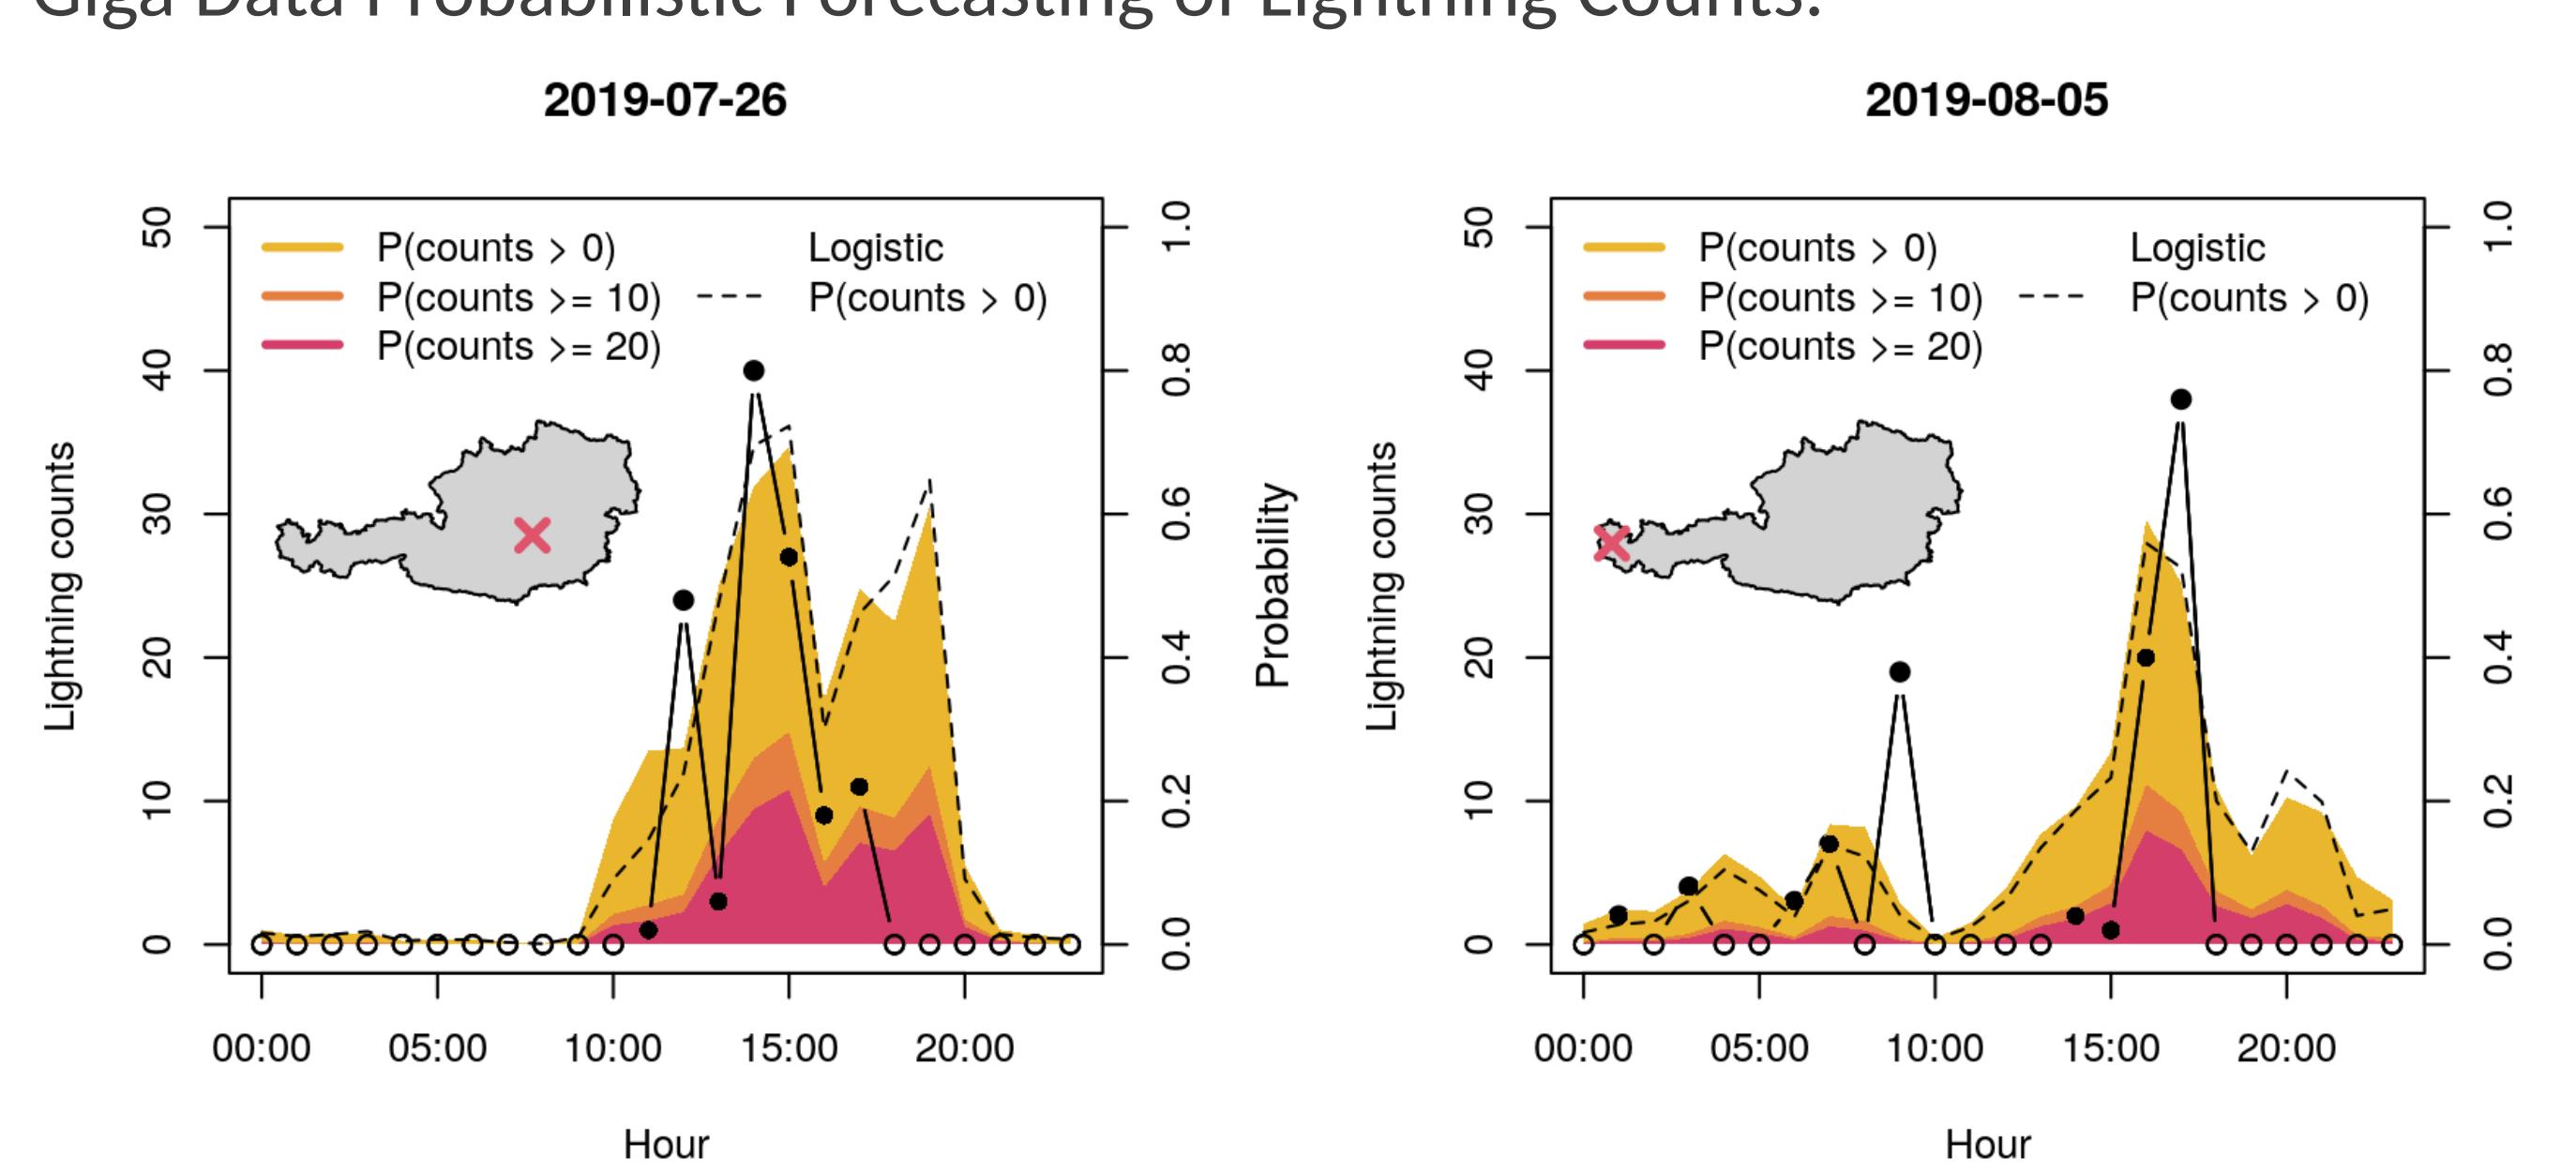

Global Health:

Explaining and Monitoring Childhood Malnutrition and Infectious Diseases.

Meteorology:

Giga Data Probabilistic Forecasting of Lightning Counts.

Software Selection
