The Climate Protection Lecture Series aims to raise awareness of climate change among students from all disciplines as well as interested members of the public and motivate them to actively protect the climate.

Since 2019, the lecture series has highlighted a wide range of specialist and research topics relating to climate protection. International guest speakers from science and business report first-hand on opportunities, solutions and model projects in the field of sustainability with a focus on SDG 13 Climate Action.

The lecture takes place regularly in the summer and winter semesters as part of the Interdisciplinary and Generic Competencies (recognized as coursework) and Lectures for Future.

Since the summer semester 2022, the course has also been offered as part of the AURORA course program and therefore entirely in English.
