IN A NUTSHELL

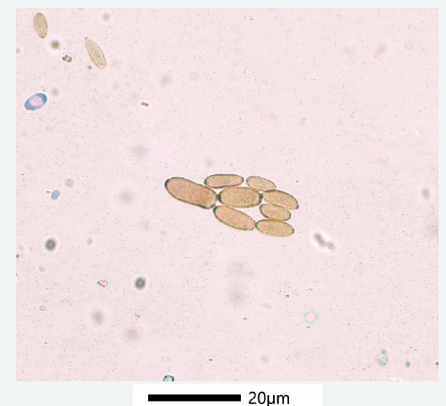

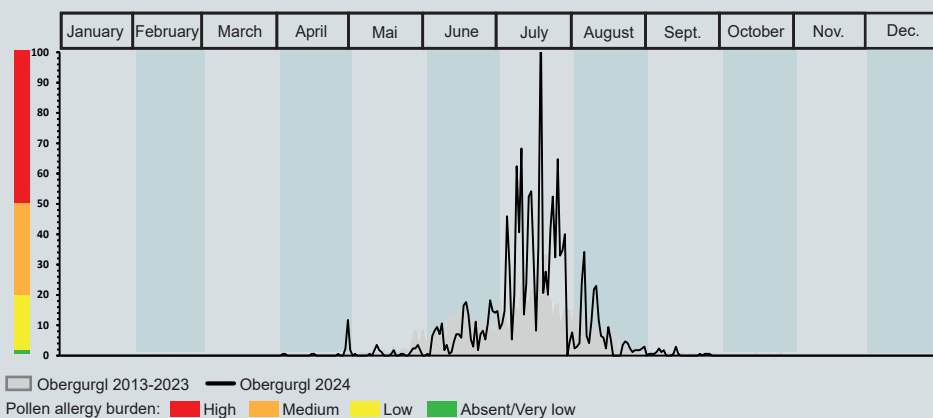

With the pollen season-ending, the air in Obergurgl will remain allergen-free for the months ahead.

The pollen load in Obergurgl and the surrounding region remains consistently very low, with only occasional single pollen grains being detected. Next week, we will release our final weekly newsletter for this year.

the coming days and may still trigger allergic reactions in some individuals.

While fungal spore concentrations are generally low, they are expected to persist in the air in

Grass pollen concentration (pollen/m³ of air)
