

Media education in early childhood - for what is it good for?

STEFAN AUFENANGER | UNIVERSITÄT MAINZ

3 arguments

- Education policy argument
- Empirical argument
- Pedagogical argument

Education policy

High school

Secondary school

Primary school

Day care center

Empirical perspective

- Toddlers with digital media
- Touchscreen media
- „digital natives“

Empirical Evidence

- Study I: digital media in families with children age zero to five
- Study II: Effects of Computers in Kindergarden to communicative and cognitive competencies of children age three to six

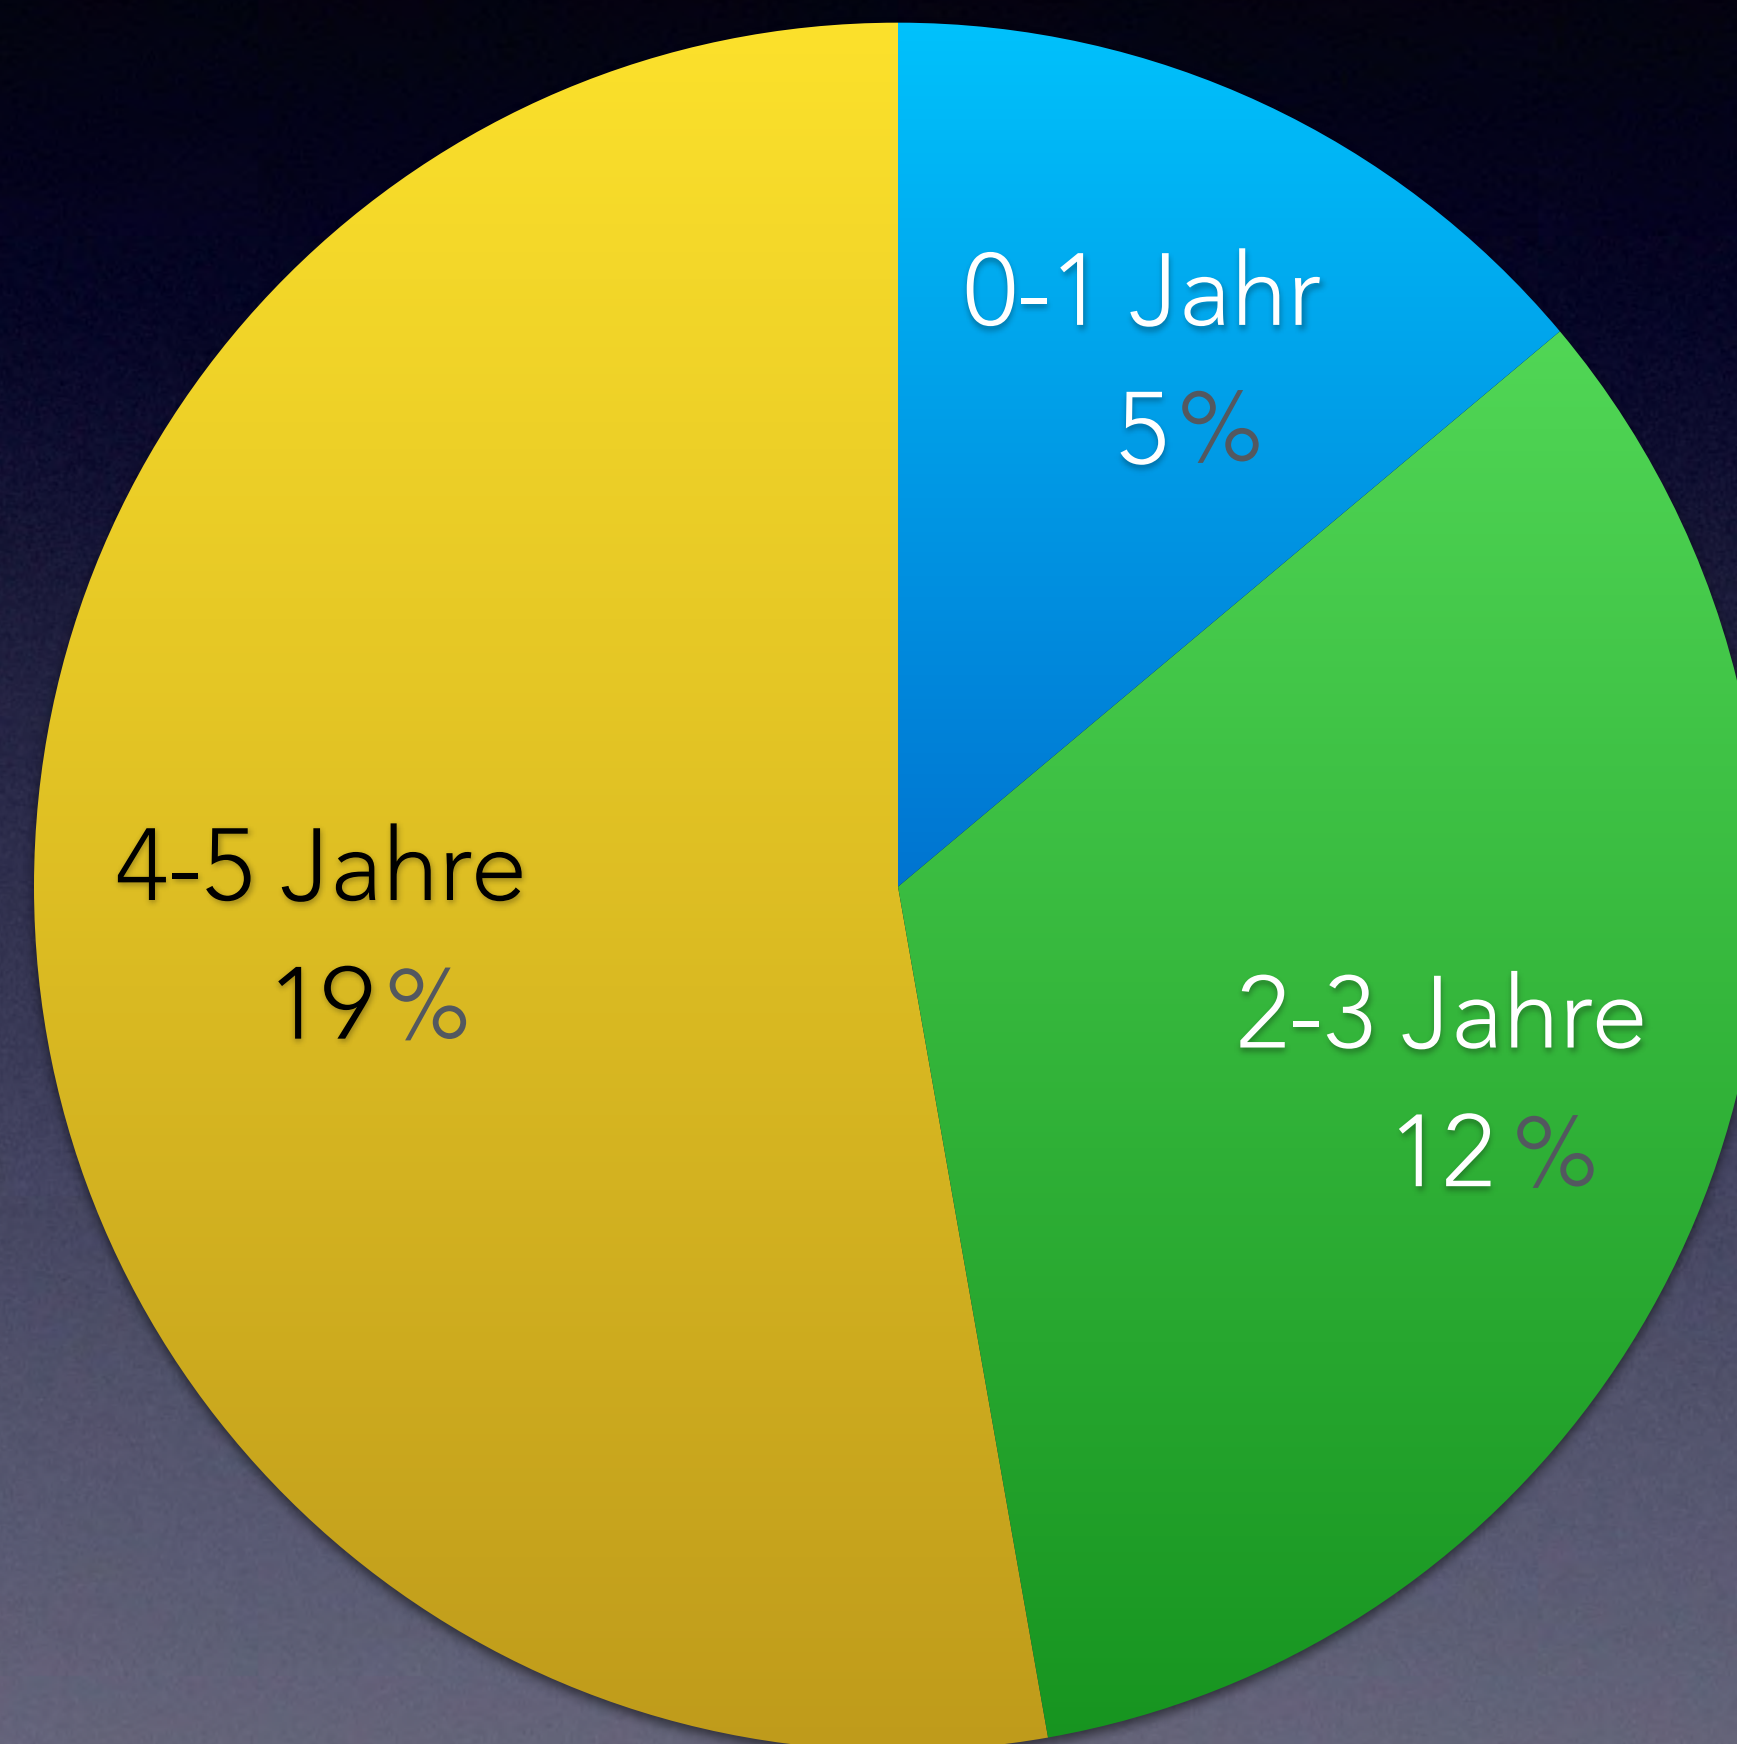

Study II: Digital media in young families

- representative survey with 744 mothers with children aged 0 to 5
- March 2014
- Supported interview

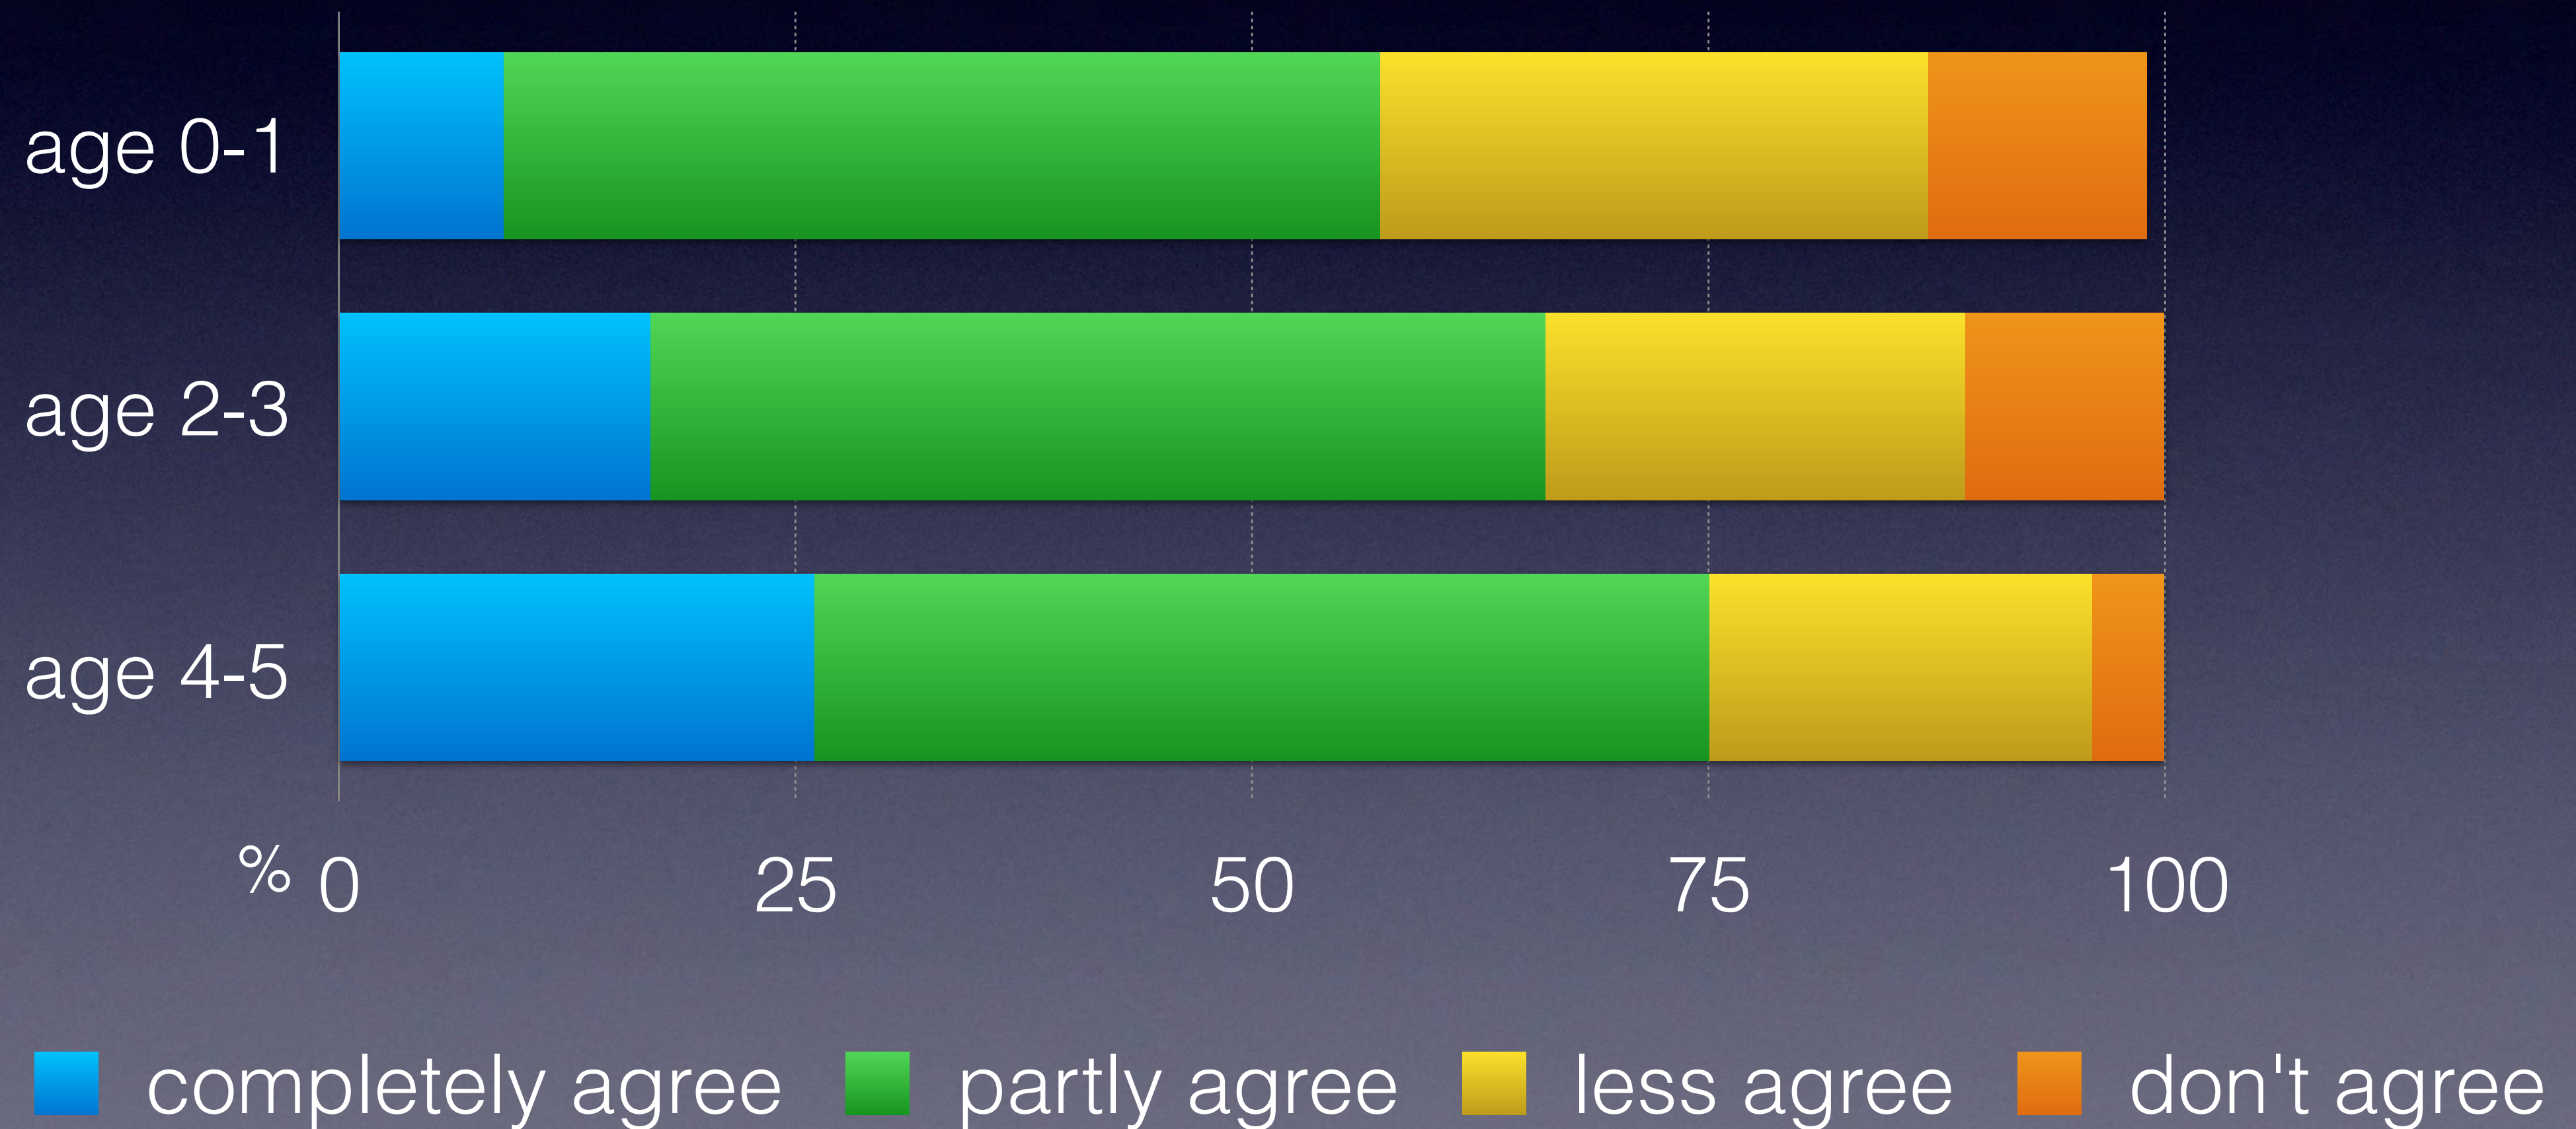

use of digital media

shared reading with digital media

Statement 1: young children should have access to digital media

Statement 2: digital media can influence children negatively

Study II: Computer in Kindergarten

Early Computer Literacy project

- 6 Kindergarten
- 132 children aged 3-6
- 25 teachers
- 1 year impact of Computer use
- K-ABC (Kaufmann's Assessment Battery for Children) standardized (mean = 100); considering children's age; measures two forms of cognition: comprehensive/particular, and skills

average time of computer use per day (n=44)

Comparison computer literacy T1 to T2

Cognitive Development: simultaneous processing

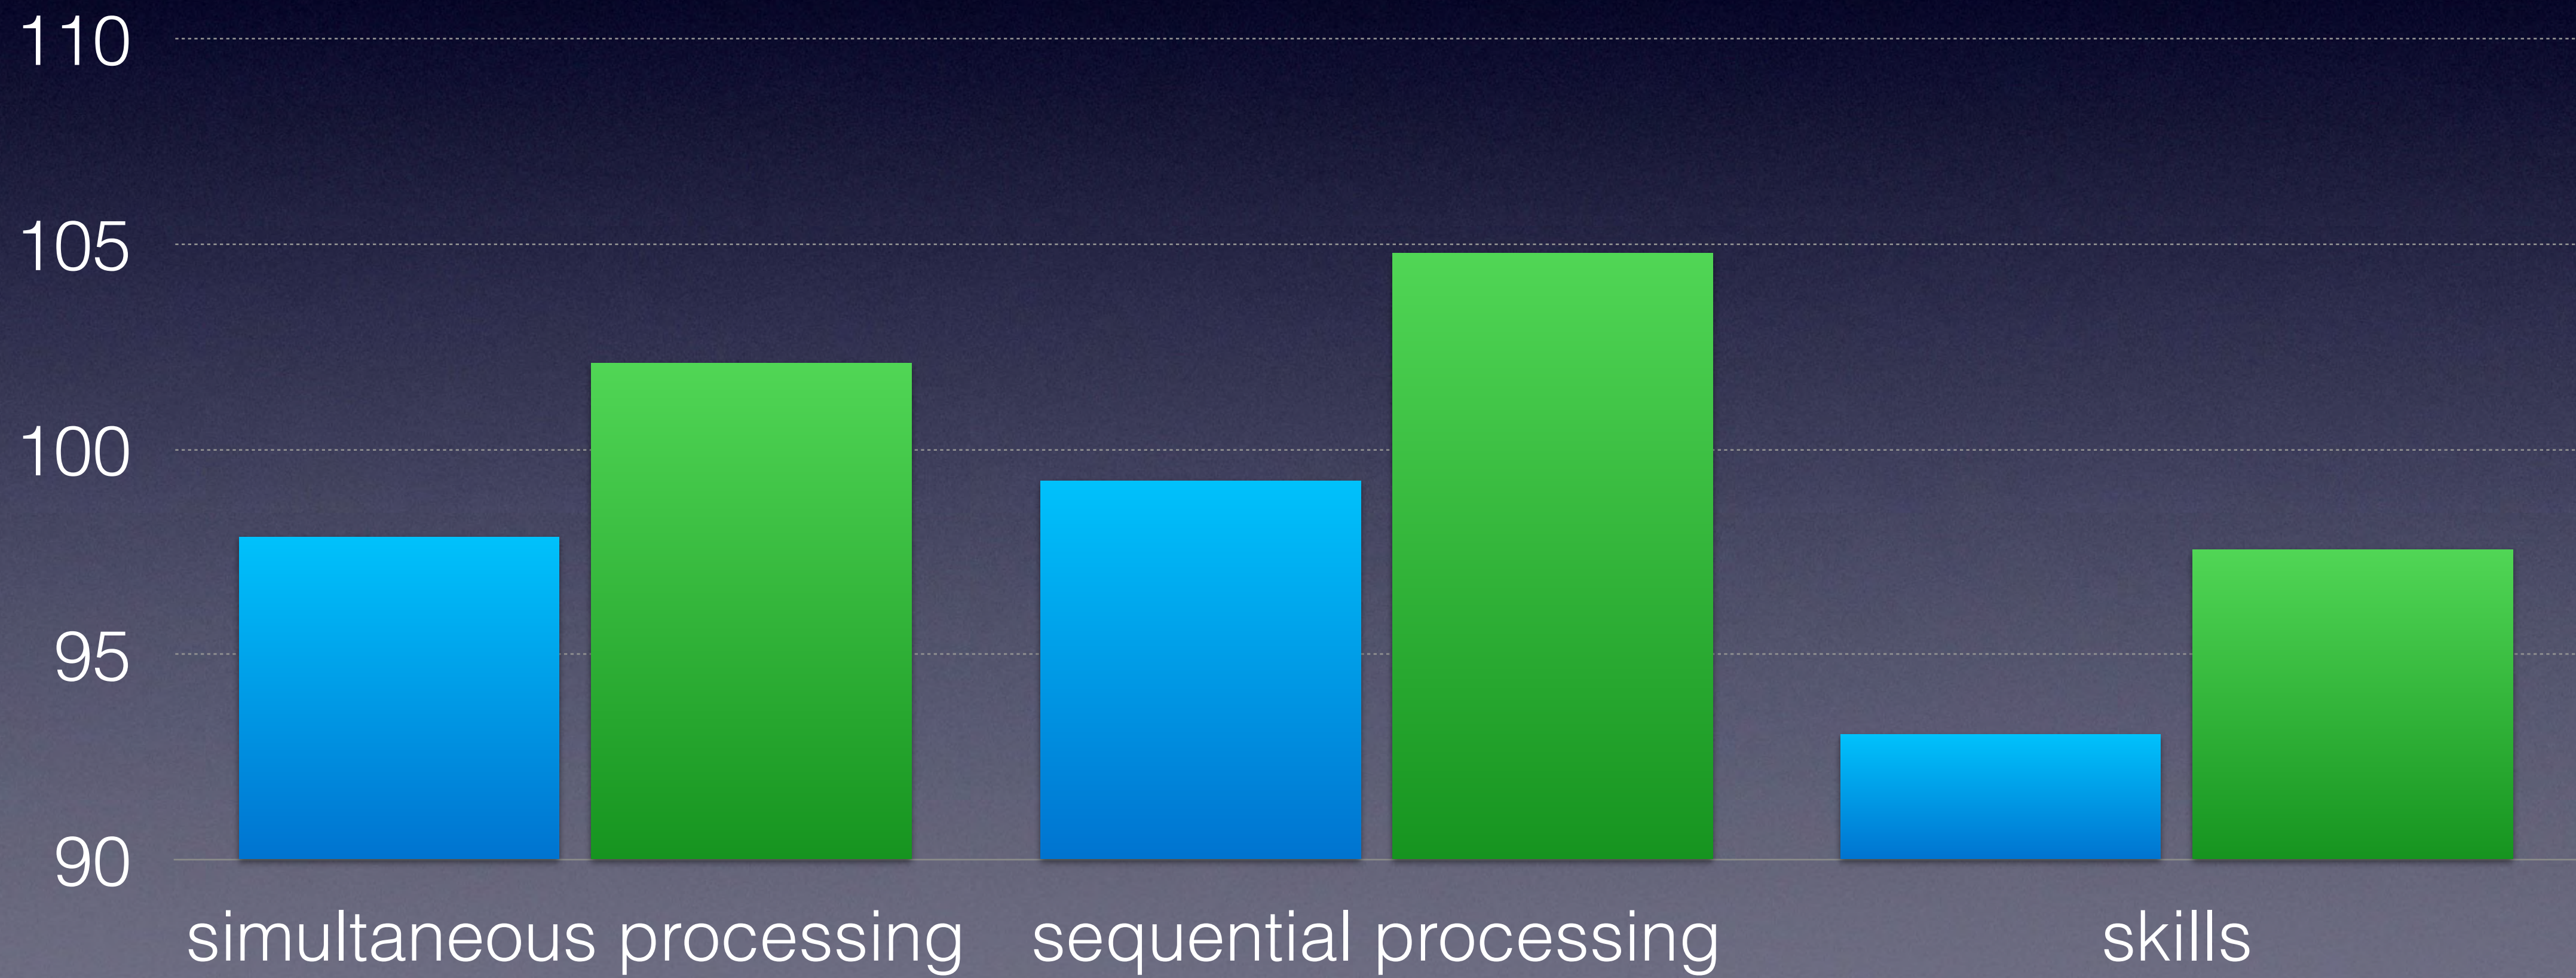

Cognitive Development: Sequentielle processing

Cognitive Development: Skills

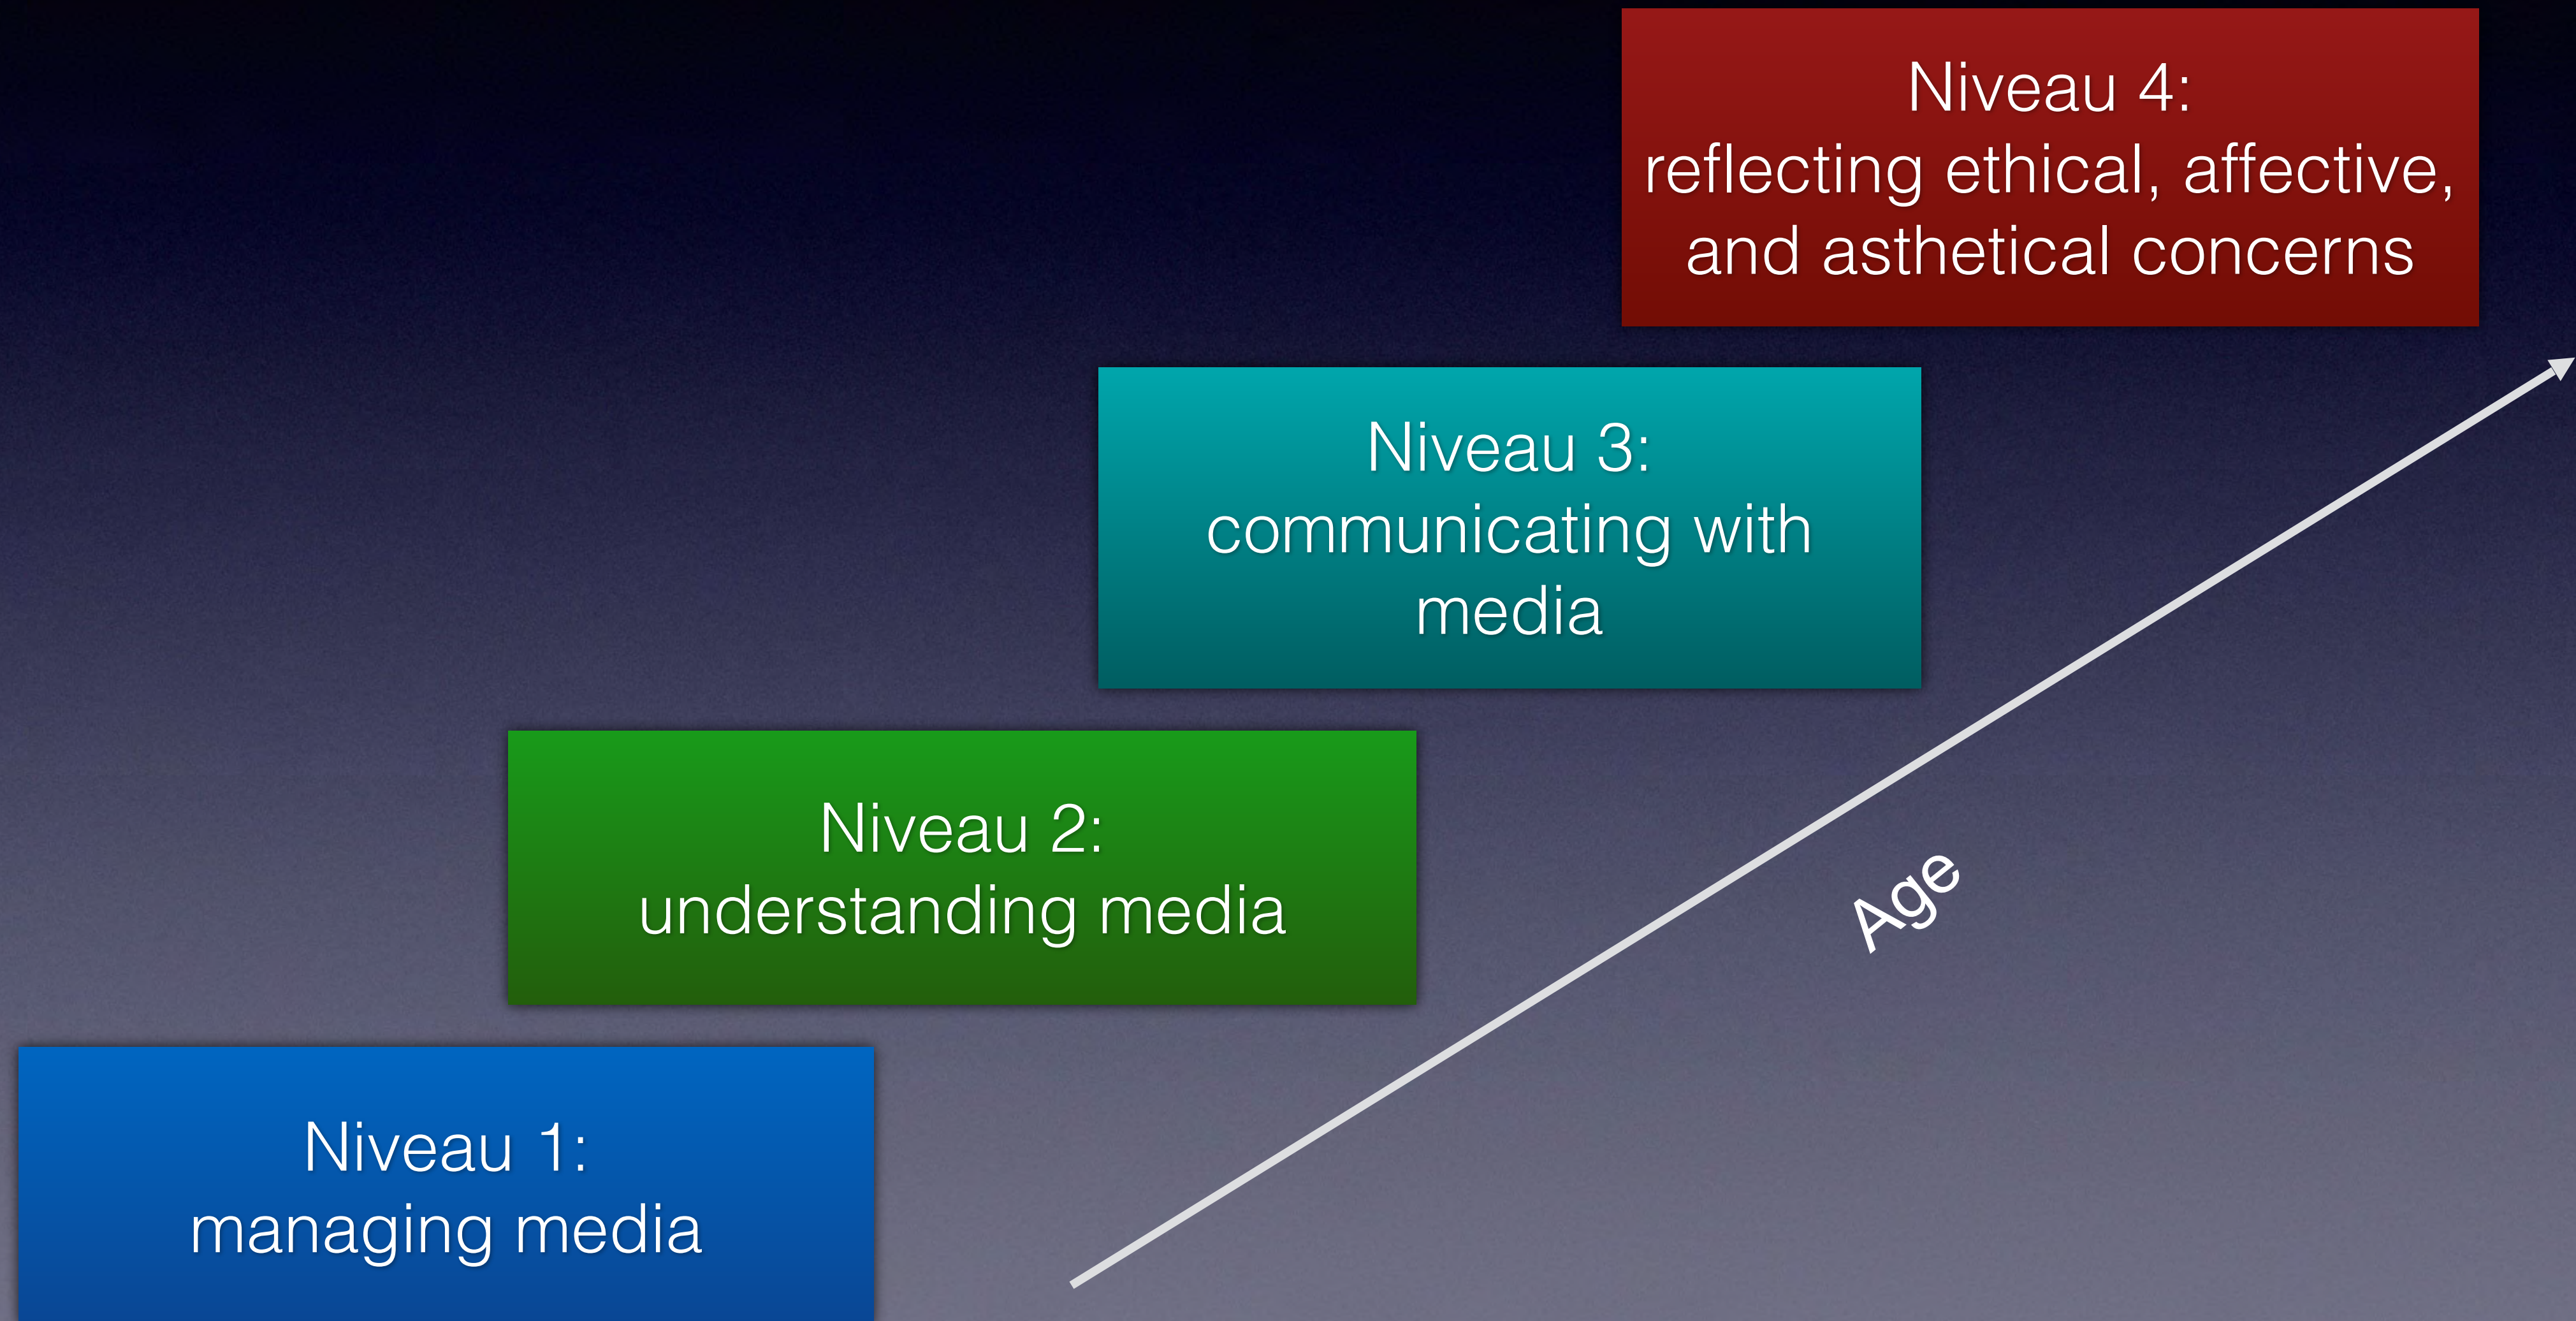

Comparision of means T1 to T2

pedagogical arguments

- Picking up the media world of children
- educating children for Media literacy because they need it
- Responsibility to prepare children for the digital world

Development of media literacy

Thank you for your attention!
